### Specification Formulation Additives Rheovis® AS 1188 (PRD 30485537)

Dear Valued Customer,

Our product Rheovis® AS1188 is being produced on a regular basis. For quite some time, the values of Dispersion Viscosity have bordered on the low end of the specification limits. A review of the production process has shown that due to improved purity of monomers and system efficiency the polymerization process runs more efficiently. This refinement results in a lower Dispersion Viscosity. Therefore we would like to change the Dispersion Viscosity specification from >1000cps to >500cps.

New Dispersion Viscosity Value:

Test property  
DV

Specification  
>500 cps

Test method  
TP 2015

Please note that all other external values of the specification for this product will stay at current levels. The actual product quality and application values of this product remain unchanged.

Furthermore the product has not been subject of change concerning process parameters and conditions.

If you require additional details or support, please do not hesitate to contact your Regional Product Manager for Formulation Additives and/or the authors of this information directly.

With kind regards,

Katherine Chan  
Global Product Manager – BASF Formulation Additives
